1. Newly submitted claims 37-57 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: Invention of each of the newly presented claims 37-57 is related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, each of the newly presented claims 37-57 has separate utility such as authentication by "selection means for selecting the IC chip from among a plurality of IC chips of which identification information is stored in said storage means; and content transmission means for transmitting the content information associated with the IC chip to said information processing device" from the selection of content based on the character; "character selection means for selecting said character from among characters of which image data is stored in said storage means based on user feature information indicative of a user and at least one other person of said information processing device and said character feature information wherein the character selected is the same as the at least one other person; image data transmission means for transmitting, to said information processing device, said image data of said character selected by said character selection means; and content transmission means for transmitting content associated with said character selected by said character selection means to said information processing device. as claimed in original claims 19-36.. See MPEP § 806.05(d).
